

## MapInfo Manager v1.2 - Get the most from your spatial data

Announcing the NEW Version of MapInfo Manager PBBI's spatial data management solution designed to allow organisations to harvest and catalogue their metadata.

The new version incorporates a host of new and improved features and greater integration with MapInfo Professional and MapInfo Stratus.

### New Features

Support for SQL Server and PostGIS databases

Harvest non-spatial data!

Harvest MWS format workspaces

Metadata Editing: New "Find and Replace" capability

More control over synchronising metadata

Improved integration with MapInfo Professional

Easier use of thumbnail images of your data

Application-level security

A key element of the MapInfo Manager application is the improved productivity associated with the whole process of building catalogs from masses of data. Harvesting data and adding metadata records to Catalogs is now available as a combined operation for even more efficient data management.
