

WindowHelper 2.1

NEW VERSION 2.1!! WindowHelper is a tool that can help you manage the windows within MapInfo Professional.

Some of the features in this tool are: cloning any window, storing the size and position of certain window types, zooming to certain view of your map and the ability to restore a closed window.

Compared to WindowHelper 1.5 version 2.0 has a number of new features such as a Zoom Next, Previous, First and Last features for all your map windows, new redesigned buttons and a number of new menu items in the shortcut menus in MapInfo Professional.

Version 2.1 (uploaded 3rd February 2014) includes a tool to create map extents from one window into another window. It also now presents separate lists of the Legend Designer windows.

You can find a complete list of the new features in the documentation for WindowHelper.
